ABSTRACT

The 50 nonverbal tests in this bibliography assess aptitude and cognitive skills using various nonverbal means, such as pictures, symbols, or figures. They are useful in testing those who may have reading difficulties or those for whom English is not the primary language. Not included are aptitude measure that have both verbal and nonverbal subtests and that are used primarily with groups that do not have special needs. All ages are represented. This document is one in a series of topical bibliographies from the Test Collection (TC) at Educational Testing Service (ETS) containing descriptions of more than 18,000 tests and other measurement devices prepared by commercial publishers, teachers, educational institutions, professional associations, departments of education, counselors, etc. Each description contains the following basic information: TC Accession Number (a six-digit identification number assigned by the Test Collection); the title of the instrument; personal or institutional author; year of publication or copyright; availability source; grade level for which test is suitable; age level for which test is suitable; and abstract. Other information, which is provided when known, includes subtests, number of test items, and time required to complete the test. Information on accessing the Test Collection via Internet concludes the document. (HAC)

INTRODUCTION

Scope of Bibliography

These nonverbal tests assess aptitude and cognitive skills using various nonverbal means, such as pictures, symbols, or figures. They are useful in testing those who may have reading difficulties or for whom English is not the primary language. Not included are aptitude measures that have both verbal and nonverbal subtests and that are used primarily with groups that do not have special needs. Lists of these tests are available separately, e.g. mechanical aptitude.

Availability

Copies of the tests described on the following pages must be obtained directly from the publisher, as stated in the AV AVAILABILITY section of each test citation. Generally, the Test Collection does not have distribution rights for its holdings. However, in special instances, the Test Collection has been granted permission from individual authors to distribute their tests, which are primarily research instruments. The AV AVAILABILITY information for these instruments will be Tests in Microfiche, Test Collection, Educational Testing Service, Princeton, NJ 08541.

Guide to Citation Elements

The following is a guide to the various elements which may be present in a test citation:

AN - Six-digit identification number assigned by the Test Collection

TI - Name of the instrument

DT - Components within the overall test which assess particular skills or factors

AU - Personal or institutional author

YR - Year test was published or copyrighted

AV - Test publisher or distributor; the organization which sells or distributes the instrument

TG - List of ages for which test is suitable

AB - A description of the test and its purpose

AN ACCESSION NUMBER: TC016273 ETS 8908.
TI TITLE: The Board-Block Test.
AU AUTHOR: Eliot-John.
YR YEAR: 88.
AV AVAILABILITY: Dr. John Eliot; Institute for Child Study, University of Maryland, College Park, MD 20742.
TG TARGET AUDIENCE: AGE 7-17, Adults.
NT NOTES:
TIME: 20.
ITEMS: 30.
AB ABSTRACT: This paper and pencil test was designed to measure the ability to perceive and to imagine object arrangements from different viewpoints. Each test item consists of a page showing a photograph of five blocks arranged around a large black baseboard, and six side-view photographs of these same blocks taken from various positions around the baseboard. Subjects indicate where they would have to stand, in reference to the baseboard photograph, in order to see each of the side-view photographs. This procedure is an adaptation of Piaget's three mountain task. When group-administered, grade 4 is the lower limit. For individuals, it is useful at grade 2 or 3. May be used with non-readers as instructions are pictorial. For research use only.

AB ABSTRACT: This measure of Spanish hearing vocabulary is a version of the Peabody Picture Vocabulary Test developed for use with Spanish speaking children and adolescents. It was standardized in Puerto Rico and Mexico. The manual is available in both Spanish and English. When it is used as an achievement test, it may be used to show student progress when Spanish is the language of instruction or when assessing proficiency in Spanish as a second language. It may be used as a screening test of scholastic aptitude when Spanish is the language of the home and community and when Spanish is the language of instruction. It is individually administered and does not require reading, verbal or written responses. Also said to be useful for screening at the kindergarten and first grade level for follow-up assessment, to determine language of instruction for bilingual children. The examinee points to one of a series of plates in response to an oral stimulus. Norms for Hispanic children and youth on the U.S. mainland will be developed if examiners volunteer to test a group of these students.

AN ACCESSION NUMBER: TC014769 ETS 8609.
TI TITLE: Matrix Analogies Test, Short Form.
DT SUBTESTS: Pattern Completion; Reasoning by Analogy; Serial Reasoning; Spatial Visualization.
AU AUTHOR: Naglieri-Jack-A.
YR YEAR: 85.
AV AVAILABILITY: The Psychological Corporation; 555 Academic Court, Austin, TX 78204-0952.
GL GRADE LEVEL: K; 1; 2; 3; 4; 5; 6; 7; 8; 9; 10; 11; 12.
NT NOTES:

AB ABSTRACT: Designed to provide a measure of nonverbal reasoning that could be administered as a screening test in a group setting. Uses abstract designs of the standard progressive matrix type and brief directions. It was based on factors identified for the Raven's Progressive Matrices (TC 810027). Said to be especially useful for those with limited English skills, a handicap or other cause for lack of verbal ability. It is norm referenced and standardized on a national sample of children living in the United States. May be used in screening for learning problems in the case of an ability/achievement discrepancy. Some training in group testing is

required for administration. Because of its nonverbal nature, the test is said to be culture reduced. It may be used with deaf and mentally retarded individuals as well. Percentile ranks, stanines and age equivalent scores can be computed.

AN ACCESSION NUMBER: TC014523 ETS 8605.
TI TITLE: Matrix Analogies Test, Expanded Form.
AU AUTHOR: Naglieri-Jack-A.
YR YEAR: 85.
AV AVAILABILITY: The Psychological Corporation; 555 Academic Court, San Antonio, TX 78204-0952.
TG TARGET AUDIENCE: AGE 5-17.
NT NOTES:

ITEMS: 64.
AB ABSTRACT: Designed as an individually administered measure of nonverbal ability. Allows individuals to either point or say aloud the number of their answers. Uses 64 abstract designs of the standard progressive matrix type. Test format reduces the effects of such variables as motor coordination, verbal skills, time pressure, and primary language. Can be used with individuals with limited English language skills, or those with a handicap, such as deafness, cerebral palsy, or communication disorders. May also be useful with exceptional populations, such as hearing impaired or mentally retarded. Items are organized in four item groups: pattern completion, reasoning by analogy, serial reasoning, and spatial visualization. Designed to be used as part of a comprehensive testing battery.

AB ABSTRACT: Designed to measure intellectual abilities of children ages 3-9. Measures the same basic theoretical domains as the Detroit Tests of Learning Aptitude, Revised (TC 013 737); linguistics, cognition, attention, and motor. Items are arranged in developmental order from easiest to most difficult. Particularly useful with low-functioning school-aged children. Can be used to

isolate special individual strengths and weaknesses and to identify children deficient in general and specific attitude. May also be used in research studies investigating aptitude, intelligence, and cognitive behavior.

AB ABSTRACT: A language-free intelligence test used to evaluate the intellectual capacity of those individuals who are difficult or impossible to test with traditional pencil and paper tests. These include persons who are mentally retarded, stroke patients, bilingual and non-English speaking, speech or language handicapped, or learning disabled. The basis of all the test items is problem solving and requires subjects to solve problems by identifying relationships among abstract figures. The examiner pantomines the instructions and the subject points to the appropriate response. Test is not timed and requires approximately 15 minutes to administer. Available in two-equivalent forms. Administered individually or to small groups.

AB ABSTRACT: Series of five tests to evaluate nature and degree of intellectual disorders and to aid in differential diagnosis. Wide range assessment of intellectual functions which helps to distinguish between mental subnormality and abnormality, assess cognitive deficits due to impaired development versus later regression, and differentially diagnose mental retardation versus psychosis. Designed to be suitable for a psychiatric population. Tests are brief, easily-administered, self-paced, require no verbal response, demand little attention or informational knowledge and are valid for repeated use. Suitable for psychiatric patients who are intellectually limited, nonverbal, inattentive, overtly psychotic or otherwise untestable by conventional means. Five tests examine areas of concept formation, symbolic thinking, socialization of thought, perceptual development and temporal attention.

AB ABSTRACT: Designed as a nonverbal Binet scale for young children. Tests are untimed and those at lower end of scale measure ability to learn rather than acquired skills or learned material. Ratings obtained from combining scores on this instrument with the Revised Form II of Point of Scale Performance Tests (TC000842) yield a reliable measurement of general intelligence except in areas of oral and written response. Results are especially useful with children with a foreign language handicap or delayed speech.

TG TARGET AUDIENCE: AGE 2-17, Adults.
AB ABSTRACT: Nonverbal intelligence test designed for ages 2 through adult. Does not require speech by examiner or subject. Suitable for mental abilities from retardation to superior intellect. Binet-type year scale has four tests at each year-level from Year II through Year XVI, and six tests at Year XVIII. Examinatior is begun with the first test in the year level which is two year levels below that of the subject's estimated mental age.

AB ABSTRACT: Diagnostic measure using children's spontaneous non-verbal play activities in a structured situation to identify the level of a child's symbolic thinking and early concept formation. To be used with children who have failed to develop receptive or expressive language. Unlike performance tests in that it measures semantic rather than spatial relationships and ability to deal with

symbols in their simplest form, main function is to identify children whose failure to communicate is due to an environmental cause, not a lack in the area of symbolization, or a developmental delay.

AB ABSTRACT: A nonverbal test designed for use as an aid in assessing mental ability. Requires the examinee to solve problems presented in abstract figures and designs. Scores are said to correlate well with comprehensive intelligence tests. This form is designed for use with persons having above-average intellectual ability. Norms are estimated for a British population at ages 11 1/2, 14, 20, 30, and 40. Said to be culture fair. Set I covers all intellectual processes covered by the Standard Progressive Matrices Sets. Set II provides a means of assessing all the analytical and integral operations involved in the higher thought processes and differentiates between people of superior intellectual ability.

AB ABSTRACT: This Picture Test was formerly titled Picture Intelligence Test 1. It was developed in England for children 7 and 8 years of age. It is used as an intelligence test and the scores are similar to intelligence quotients in their numerical distribution, but they differ in that they are not arrived at through consideration of mental age. Each child is assessed by comparing him with a representative sample of children of exactly the same age.

AB ABSTRACT: This instrument is the revised edition of the Non-Verbal Test 5, 1953. It has been designed to measure the non-verbal ability of children in the age range 8-11. There are practice items before each of the sub-tests so that all children will be familiar with the type of item in the test and poor readers will not be handicapped. In each of the four area subtests, cypher, similarities, analogies, and series, the student is shown a series of pictures and must choose the answer from another set of pictures. In the age range, there was a significant difference between boys and girls and it is recommended that the sexes be considered separately.

AB ABSTRACT: This test is used to assess non-verbal skills in children, ages 10-15. The material was prepared at the National Foundation for Education Research (NFER) and was originally constructed in 1951 when it was called Non-Verbal Test 3. The instrument was intended for children about 11 years of age, but has been found to give satisfactory results with children up to the age of 15 years. A shortened version can be given to younger children, 64 items administered in 35 minutes. The items are drawings in squares with one piece missing. The student is to select from the 5 answers which piece would give the best fit.

AB ABSTRACT: The Morrisby Differential Test Battery is a comprehensive battery of tests which objectively assesses a person's intellectual structure and basic personality characteristics. The DTB is supplied only to "Registered Approved Users." Registration as an approved user can be obtained by successfully completing a five-day training course specifically on the DTB. Designed to measure non-verbal or perceptual intelligence. Useful for career guidance in occupations which deal with real objects rather than verbal or numerical concepts. Item type in subtests two and three are same as GAT verbal but words are replaced by perceptual figures. Administration time for complete DTB is three hours and fifteen minutes.

AB ABSTRACT: The NAT is a domain-referenced battery of non-verbal tests for the assessment of general and specific abilities. It is group administered. An ability profile is produced in addition to an overall score. Tests in the battery deal with perceptual speed and accuracy, classification and concept formation, pattern analysis, reasoning, synthesis, visual-spatial scanning ability, motor sequencing skills, visual-motor coordination, memory, attention and concentration, recall and recognition. Said to be useful in testing culturally different persons.

AB ABSTRACT: An Australian adaptation of the Scale of Non-Verbal Mental Ability originally published in Great Britain. Instrument consists of non-verbal items of a diagrammatic type which are separated into five subtests. The items within each subtest are arranged in ascending order of difficulty. Two subtests are based on the principle of classification, two are on the identification of serial order, and one on the solution of diagrammatic analogies. Actual working time for the test is twenty-four minutes.

ETS TEST COLLECTION VIA INTERNET

The ERIC Clearinghouse on Assessment and Evaluation has mounted on its gopher site a database to help locate tests. This database can be used by accessing the gopher at the address: GOPHER.CUA.EDU. The ERIC/ETS Test Collection is located under: Special Resources/ ERIC Clearinghouse on Assessment and Evaluation/ Test Locator/.

To search the database, enter keywords from the title or descriptors. For example, if you would like to search for tests on oral language proficiency, you could type in all three words, or oral and proficiency. You may get slightly different results, but you will have information on a lot of tests to look at. If you know the title of the test, the best way to search is to use the main words in the title, not necessarily all of the words in the title. If you are looking for the Wechsler Intelligence Scale for Children-Revised, the most efficient way to search is with the words Wechsler, intelligence, and children.

INTRODUCTION TO THE ETS TEST COLLECTION

The Educational Testing Service (ETS) Test Collection database contains records on over 9,500 tests and research instruments. These records describe the instruments and provide availability information. The Test Collection encompasses virtually all fields from vocational interest inventories for adults to instruments that measure shyness or predict recidivism in released criminal offenders, to assessment of managerial style, as well as education-related achievement and aptitude tests. The test descriptions are indexed with ERIC Thesaurus terms for subject accessibility.

This is a joint project of ETS and ERIC_AE. ETS Library and Reference Services Division prepares the descriptions. ERIC_AE maintains the database and hosts the Search System. ERIC_AE has also begun to put ETS prepared test descriptions into the ERIC *Resources in Education* database. About 15 descriptions are added each month.

You may download individual and small groups of test descriptions and you may point to this service from any Gopher Site.

WHAT KIND OF TEST ARE DESCRIBED?

The Test Collection database collects a variety of instruments: achievement tests, aptitude tests, personality measures, attitude measures, career/vocational interest measures, occupational tests such as nursing or sales skills inventories. Many research instruments are collected as well as tests from commercial publishers.

WHAT INFORMATION IS AVAILABLE ABOUT THE TESTS?

The title, author, publication date and source appear in the record. An abstract describing the instrument, intended population, and uses accompanies the record. Subject terms give the age and grade level information as well as ERIC Thesaurus terms that describe the test.

DOES THE TEST COLLECTION DATABASE REVIEW THE TESTS?

No, other reference guides such as Mental Measurements Yearbooks, Tests: A Comprehensive Reference for Assessments in Psychology, Education, and Business, and Test Critiques distributed by Pro-Ed fill that role. You can search the tables of contents for the MMY and Test Critiques through the ERIC_AE Gopher Site.

ARE ALL THE TESTS IN THE DATABASE CURRENTLY IN PRINT?

No, some of the items are out of print. We suggest contacting the publisher for permission to use out-of-print materials. Phone numbers can be located using another menu option on the ERIC_AE Gopher Site.

WHERE CAN I SEE THE ACTUAL TEST INSTRUMENTS?

Availability information is provided in the records. Many colleges and universities have test collections in their libraries. Talk to you local librarian for more information.

WHAT IS TESTS IN MICROFICHE?

Tests in Microfiche is a subcollection of unpublished research instruments that are available for purchase in microfiche from the ETS Test Collection. The collection includes instruments appropriate for diverse populations (infants, learning disabled, adults, etc.) Each set spans a wide range of topics such as job satisfaction and attitudes towards school. More than 800 tests are available.

DOES THE TEST COLLECTION PROVIDE REFERENCE SERVICES?

No, the descriptive information in the database should help answer most questions people may have. And the publisher of the particular test is the most competent source of information. You can, however, route general inquiries to ERIC_AE@CUA.EDU.
